Bowie & Dick Test Pack

International Standards demand that vacuum-assis ed steam sterilizers must be tested at the beginning of each working day. Bclean Bowie & Dick Test Pack concept allows you to fulfill this requirement with minimum effort and with the highest level of quality.

Test Pack designed for vacuum-assisted sterilizers to test the efficiency of the vacuum system, to remove air from the sterilizer chamber and to detect leaks in the system that would allow air into the chamber.

A uniform change of the indicator sheet indicates that all the air was removed and replaced by steam.

Performed after a warm-up cycle at the beginning of every day, the Bowie-Dick Test verifies the sterilizer effectively removes air. Bowie & Dick test packs verifiy not only the steam penetration but also air discharge removal and Air Leaks

Product details

- Bowie & Dick test packs verifiy not only the steam penetration but also air discharge removal and Air Leaks
- Easy to use and cost effective
- Water-based and non-toxic chemical indicator
- Indicator pattern is easy to read and interpret
- Designed to give equivalent results to those obtainable by the Bowie and Dick protocol
- The backside of the indicator sheet contains fields to be filled out and it can be kept as a permanent record for traceability purposes
- Compatible with ISO 11140-4 (Class 2 + 4)
- Customer oriented designs are possible
